AKI Staging (AKIN / KDIGO)

Acute kidney injury · creatinine OR urine output defines the stage

1	**Creatinine rise ≥ 0.3 mg/dL or ×1.5-2**	or urine < 0.5 mL/kg/h for 6 h
2	**Creatinine ×2-3**	or urine < 0.5 mL/kg/h for 12 h
3	**Creatinine ×3, ≥ 4 mg/dL or dialysis**	or anuria

Stage 1	Stage 2	Stage 3
Mildest	Moderate	Most severe, worst prognosis

Urine output alone can define the stage · RIFLE: Risk, Injury, Failure, Loss, ESRD
